CONTENTS OF VOLUME 101

PAGE

C. MAHRT—The influence of momentum advections on a well-mixed layer 1

J. H. UNSWORTH and J. L. MONTEITH—Long-wave radiation at the ground. I. Angular distribution of incoming radiation 13

J. H. UNSWORTH—Long-wave radiation at the ground. II. Geometry of interception by slopes, solids, and obstructed planes 25

J. W. BRYANT and K. A. BROWNING—Multi-level measurements of turbulence over the sea during the passage of a frontal zone 35

KEVIN E. TRENBERTH—A quasi-biennial standing wave in the Southern Hemisphere and interrelations with sea surface temperature 55

R. S. HARWOOD—The temperature structure of the Southern Hemisphere stratosphere August–October 1971 75

A. S. THOM, J. B. STEWART, H. R. OLIVER and J. H. C. GASH—Comparison of aerodynamic and energy budget estimates of fluxes over a pine forest 93

ERNEST W. PETERSON—The Risø profiles: a study of wind and temperature data from the 123-m tower at Risø, Denmark 107

M. R. PLATT—Infrared emissivity of cirrus – simultaneous satellite, lidar and radiometric observations 119

N. CARRAS and W. C. MACKLIN—Air bubbles in accreted ice 127

P. S. ARYA—Geostrophic drag and heat transfer relations for the atmospheric boundary layer .. 147

Correspondence and Notes—

C. CORRADINI and M. SEVERINI—Laboratory experimental check of radiative air cooling theory 163

H. R. OLIVER—Wind speeds within the trunk space of a pine forest 167

J. R. GARRATT—Limitations of the Monin–Oboukhov similarity theory for turbulent transfer of momentum in unstable conditions in the atmospheric surface layer .. 169

A. B. PITTOCK—Comment on the paper by K. E. Trenberth 'A quasi-biennial standing wave in the Southern Hemisphere and interrelations with sea surface temperature' .. Reply by K. E. TRENBERTH 172

J. WARNER—Discussion of Mason and Jonas' model of droplet growth in cumulus clouds. Reply by B. J. MASON 176

R. F. GRIFFITHS—Sources of error in the use of the Marshall-Palmer drop-size distribution equation 181

H. G. ELLINGER BEQUEST 184

LIBRARY ACQUISITIONS 184

Discussion—

C. J. AANENSEN—The use of Nimbus 4 radiance and radiosonde data in the construction of stratospheric charts (*Q.J.*, **99**, pp. 657–668) 185

A. J. SIMMONS—Planetary-scale disturbances in the polar winter stratosphere (*Q.J.*, **100**, pp. 76–108) 185

Proceedings at meetings of the Society 186

Reviews—

Weather, Louis J. Battan (Ronald Frith); *Progress in oceanography*, Vol. 6, Ed. B. A. Warren (H. Charnock); *Climatic resources and economic activity*, Ed. James A. Taylor (Tony J. Chandler). 189

Obituary Notices 191

J. G. CHARNEY—Dynamics of deserts and drought in the Sahel (Symons Memorial Lecture) 193

J. N. CARRAS and W. C. MACKLIN—The opacity of accreted ice 203

P. J. RYE and W. C. MACKLIN—Crystal size in accreted ice 207

J. G. De JONCKHEERE—A measurement of the mixing ratio of water vapour from 15 to 45 km 217

S. G. JENNINGS—Charge separation due to water drop and cloud droplet interactions in an electric field 227

C. D. HALL—The simulation of particle motion in the atmosphere by a numerical random-walk model 235

J. J. BARNETT, J. T. HOUGHTON and J. A. PYLE—The temperature dependence of the ozone concentration near the stratopause 245

F. H. BERKSHIRE—Two-dimensional linear lee wave modes for models including a stratosphere 259

M. G. COLGATE—An attempt to predict the anomalies in the monthly mean sea level pressure field a month ahead 267

R. S. PASTUSHKOV—The effects of vertical wind shear on the evolution of convective clouds 281

E. C. KUNG—Balance of kinetic energy in the tropical circulation over the Western Pacific 293

L. BODE, L. M. LESLIE and R. K. SMITH—A numerical study of boundary effects on concentrated vortices with application to tornadoes and waterspouts 313

J. J. DeLUISI, B. M. HERMAN, S. R. BROWNING and R. K. SATO—Theoretically determined multiple-scattering effects of dust on Umkehr observations 325

K. A. BROWNING, C. W. PARDOE and F. F. HILL—The nature of orographic rain at wintertime cold fronts 333

H. CATTLE and K. WESTON—Budget studies of heat flux profiles in the convective boundary layer over land 353

JUHANI RINNE and VESA KARHILA—A spectral barotropic model in horizontal empirical orthogonal functions 365

Correspondence and Notes—

D. V. HOYT—New calculations of the Linke turbidity coefficient 383

C. G. SMITH—Central England temperatures; monthly means of the Radcliffe Meteorological Station, Oxford. Reply by GORDON MANLEY 385

A. B. PITTOCK—Comment on the paper 'The laminated structure of the ozone in the atmosphere' by G. M. B. DOBSON 389

M. H. UNSWORTH and J. L. MONTEITH—Attenuation of total solar radiation by aerosol over Britain and the Atlantic Ocean. Reply by L. R. COLLIER and J. G. LOCKWOOD 390

W. T. ROACH—Comment on paper 'Gradient Richardson number profiles and changes within an intense mid-tropospheric baroclinic zone' by L. F. BOSART and O. GARCIA. Reply by L. F. BOSART 392

Discussions—

M. BADER, J. GLOSTER, J. L. BROWNSCOMBE and P. GOLDSMITH—The production of sub-micron ice fragments by water droplets freezing in free fall or on accretion upon an ice surface (*Q.J.*, **100**, pp. 420–426) 395

S. C. MOSSOP, J. L. BROWNSCOMBE and G. J. COLLINS—The production of secondary ice particles during riming (*Q.J.*, **100**, pp. 427–436) 395

R. F. CHISNELL and J. LATHAM—A stochastic model of ice particle multiplication by drop splintering (*Q.J.*, **100**, pp. 296–308) 395

R. F. GRIFFITHS and J. LATHAM—Electrical corona from ice hydrometeors (*Q.J.*, **100**, pp. 163–180) 395

J. A. CRABB and J. LATHAM—Corona from colliding drops as a possible mechanism for the triggering of lightning (*Q.J.*, **100**, pp. 191–202) 395

B. J. MASON and P. R. JONAS—The evolution of droplet spectra and large droplets by condensation in cumulus clouds (*Q.J.*, **100**, pp. 23–38) 397

P. R. JONAS and B. J. MASON—The evolution of droplet spectra by condensation and coalescence in cumulus clouds (*Q.J.*, **100**, pp. 286–295) 397

Proceedings at meetings of the Society 399

Reviews—

Annual Report of the Meteorological Office 1973. London (H.M.S.O.) (R. C. Sutcliffe); *General meterology*, H. R. Byers, (A. Gilchrist); *The storage, cataloguing and retrieval of meteorological information*, J. M. Craddock (P. A. Sheppard); *Atmospheric waves*, T. Beer (R. S. Scorer) 401

TABLE OF CONTENTS

	PAGE
iituary Notices	405
G. COLLIER—A representation of the effects of topography on surface rainfall within moving baroclinic disturbances	407
U. BARNETT, R. S. HARWOOD, J. T. HOUGHTON, C. G. MORGAN, C. D. RODGERS and E. J. WILLIAMSON—Comparison between radiosonde, rocketsonde, and satellite observations of atmospheric temperatures	423
T. ROACH and M. E. HARDMAN—Mesoscale air motions derived from wind finding dropsonde data: the warm front and rainbands of 18 January 1971	437
OUGLAS S. DAVISON—The horizontal cross-sectional shape of convective plumes ..	463
W. PALTRIDGE—Global dynamics and climate—a system of minimum entropy exchange	475
CADET—Vertical wind shear measurements in the lower stratosphere	485
HOLLINGSWORTH—Baroclinic instability of a simple flow on the sphere	495
A. PEARSON—On the asymmetry of the land-breeze sea-breeze circulation	529
J. CAUGHEY and C. J. READINGS—Turbulent fluctuations in convective conditions ..	537
R. GRANT—Comparison of evaporation measurements using different methods ..	543
J. SIMMONS and B. J. HOSKINS—A comparison of spectral and finite-difference simulations of a growing baroclinic wave	551
E. FRANCIS—The use of a multipoint filter as a dissipative mechanism in a numerical model of the general circulation of the atmosphere	567
D. NASTROM, A. D. BELMONT and D. G. DARTT—Periodic variations in stratospheric meridional wind from 20 to 65 km: 80°N to 78°S	583
J. LEGG—Turbulent diffusion within a wheat canopy: I. Measurement using nitrous oxide	597
J. LEGG and I. F. LONG—Turbulent diffusion within a wheat canopy: II. Results and interpretation	611
K. ANGELL—The field of mean vertical velocity at 200 mb in south temperate latitudes as estimated from EOLE constant level balloon flights	629
J. HOSKINS and A. J. SIMMONS—A multi-layer spectral model and the semi-implicit method	637
LAN ROBOCK—On the eddy structure of hurricanes	657
D. SMITH and E. G. BANKE—Variation of the sea surface drag coefficient with wind speed	665
orrespondence and Notes—	
B. J. MASON—Production of ice crystals by riming in slightly supercooled cumulus	675
RALPH SHAPIRO—The variance spectrum of monthly mean central England temperatures	679
eport of the Council for 1974	683
roceedings at meetings of the Society	699
eview—	
Arizona climate 1931–1972, Ed. by W. D. Sellers and R. H. Hill (J. S. Hopkins)	701
bituary Notice	703
RANCIS P. BRETHERTON—Recent developments in dynamical oceanography. Symons Memorial Lecture	705
S. HARWOOD and J. A. PYLE—A two-dimensional mean circulation model for the atmosphere below 80km	723
A. T. BYE, B. J. NOYE and T. W. SAG—A monthly analysis of the global wind stress and the ocean transports predicted from a numerical model	749
A. PLUMB—Momentum transport by the thermal tide in the stratosphere of Venus ..	763
M. BURRIDGE—A split semi-implicit reformulation of the Bushby-Timpson 10-level model	777
C. KUNG and W. E. BAKER—Energy transformations in middle-latitude disturbances ..	793

P. D. TYSON, T. G. J. DYER and M. N. MAMETSE—Secular changes in South African rainfall: 1880 to 1972 81

J. J. BARNETT—Hemispheric coupling – evidence of a cross-equatorial planetary wave-guide in the stratosphere 83

R. W. SIMPSON and W. K. DOWNEY—The effect of a warm mid-latitude sea surface temperature anomaly on a numerical simulation of the general circulation of the southern hemisphere 84

DAVID M. FARMER—Penetrative convection in the absence of mean shear 86

K. A. BROWNING and G. W. BRYANT—An example of rainbands associated with stationary longitudinal circulations in the planetary boundary layer 89

T. J. LYONS–Mesoscale wind spectra 90

F. A. BERSON and G. BAIRD—A numerical model of cumulonimbus convection generating a protected core 91

P. S. JACKSON and J. C. R. HUNT—Turbulent wind flow over a low hill 92

LANCE F. BOSART—New England coastal frontogenesis 95

WILLIAM P. WINN and L. G. BYERLEY, III—Electric field growth in thunderclouds .. 97

A. PALUMBO—Lunar tides in meteorological data 99

Correspondence and Notes—

K. RAGHAVAN, D. R. SIKKA and S. V. GUJAR—The influence of cross-equatorial flow over Kenya on the rainfall of Western India. Reply by J. FINDLATER 100

T. G. J. DYER—The assignment of rainfall stations into homogeneous groups: an application of principal component analysis 100

T. J. LYONS and B. W. FORGAN—Atmospheric attenuation of solar radiation at Adelaide.. 101

L. F. HUBERT—Note on jet cirrus emissivity 101

MAO-FOU WU—The role of eddies in atmospheric water vapour transport 101

LIBRARY ACQUISITION 102

Proceedings at meetings of the Society 102

Discussions—

A. J. DYER—The effect of volcanic eruptions on global turbidity and an attempt to detect long-term trends due to man (*Q.J.*, **100**, pp. 563–571) 102

L. R. COLLIER and J. G. LOCKWOOD—The estimation of solar radiation under cloudless skies with atmospheric dust (*Q.J.*, **100**, pp. 678–681) 102

J. G. KURIYAN and Z. SEKERA—Scattering in liquid haze – analytic approximations (*Q.J.*, **100**, pp. 67–75) 102

M. H. UNSWORTH and J. L. MONTEITH—Long-wave radiation at the ground.
I. Angular distribution of incoming radiation, and
II. Geometry of interception by slopes, solids, and obstructed planes (*Q.J.*, **101**, pp. 13–34).. 102

Reviews—

Principles of applied climatology, K. Smith (B. W. Atkinson); *Microclimate: the biological environment*, N. J. ROSENBERG (M. Unsworth) 103

Obituary Notices 103

Index and Contents pages 103
